

VTS 8 Upgrade

The procedure

The **Vienna Test System** is the result of many years of development work and continuous product refinement. Know-how from our development departments, findings from our test and research laboratory and the practical experience of our clients and users are all taken into account and incorporated into the system. To enable us to continue to provide a test system that meets all the modern requirements of computerized psychological assessment, the Vienna Test System has been re-programmed.

By upgrading from your existing VTS (VTS 6) to the new VTS (VTS 8) you will benefit from an innovative technology that is even more user-friendly than before and have access to new tests and test sets as well as a number of new functions. There are several important points to be borne in mind when switching to the new VTS. They are summarized below:

What does an upgrade involve?

- > You order an upgrade.
- > We send you a dongle for the new Vienna Test System (VTS 8).
 - a. If you have purchased test usages, you will receive one-month licenses for the tests that you use, enabling you to use the tests for a month.
 - b. If you have time-based licenses, the remaining time will already be included on this dongle.
- > With the new VTS you will receive an envelope addressed to SCHUHFRIED for the return of your previous dongle.
- > Please place your previous (VTS 6) dongle in this envelope and return it to us as soon as possible. Licensing regulations mean that this is essential.
- > If you use test usages, we shall determine the number of usages you have left when we receive the dongle. You will then receive a license file with the right license codes for your new VTS 8. This file should be installed in the VTS. All your previous licenses and tests will then be available in the VTS 8.
- > To import your existing data (client details and test results) into the new system intact, please refer to the document “Vienna Test System – Data migration”.
